

The modern trend towards high-gloss surfaces requires special scratch protection

Our conventional 2-component high-gloss topcoat SR, which meets the growing demands for appearance, quality and individualization options, especially in the automotive industry, is perfectly suited for this purpose.

The new scratch resistance coatings for the coating of plastic surfaces offer many benefits:

- high scratch resistance for the surfaces of devices and equipment
- scratch resistance meets VW PV3987
- no UV curing, suitable for complex 3D geometries
- reduction of scrap rates because the coating is polishable
- suitable for hot stamping process and printing
- can be processed on all high gloss systems

We fulfill (almost) all your wishes for design and surface:

- a high transparency and thus appears crystal clear
- or translucent black, in order to hide failures of substrate or other defects
- High gloss surfaces to anti-reflective surfaces are possible
- We offer you one of the best systems on the market
- We supply individual coatings in large and small batches
- Your application will be intensively supported by us
- Individual adjustment of the coating parameters for your application enables a high-quality result
